DANIEL RAKITA

CURRICULUM VITAE, February 2025

Assistant Professor
Yale University
Department of Computer Science
51 Prospect St., New Haven, CT 06511 USA
daniel.rakita@yale.edu, Personal website, Google Scholar

RESEARCH INTERESTS

My research primarily involves formulating **planning**, **optimization**, and **learning** algorithms that allow robot manipulation platforms to effectively complete tasks.

The goal of my work is to enable people to intuitively control or work alongside robot manipulation platforms to perform critical tasks deemed unsuitable, undesirable, understaffed, or unsafe for people, such as full-time homecare, home assistance, telenursing, robot surgery, disaster relief, large-scale manufacturing, nuclear materials handling, and space robotics. I use interdisciplinary techniques across robotics and computer science, including motion planning, motion optimization, shared autonomy, human-robot interaction, and machine learning to formulate and validate generalizable, end-to-end solutions within these problem spaces.

Academic Positions

Assistant Professor, Yale University, Department of Computer Science	2022 - Current
Graduate Researcher, University of Wisconsin-Madison Visual Computing Lab and Human-Computer Interaction Lab Advised by Michael Gleicher and Bilge Mutlu	2015-2022
NREIP Researcher, Naval Research Lab, Washington, D.C., Advised by Laura Hiatt	2018, 2019

EDUCATION

Ph.D. in Computer Science, University of Wisconsin-Madison Advisors: Michael Gleicher and Bilge Mutlu	2015-2022
Masters of Computer Science, University of Wisconsin-Madison	2015-2017
Undergraduate work in computer science, University of Wisconsin-Madison	2013-2015
Bachelor of Music in Performance, Indiana University-Bloomington Jacobs School of Music	2008-2012

AWARDS & HONORS

[A12]	Best Paper Award Winner, ACM/IEEE Conference on Human-Robot Interaction (HRI)	2023
[A11]	Outstanding Graduate-Student Research Award, UW-Madison	2022
[A10]	Outstanding Reviewer Award, Selected by IROS Conference Paper Review Board, Top 4 of 3,942	2021
[A9]	Cisco Graduate Student Fellowship Recipient, UW-Madison	2021
[A8]	Three Minute Thesis Competition Finalist, UW-Madison	2021
[A7]	Best Paper Award Finalist, ACM/IEEE Conference on Human-Robot Interaction (HRI)	2020
[A6]	Microsoft PhD Fellowship Recipient	2019
[A5]	Best Paper Award Winner, ACM/IEEE Conference on Human-Robot Interaction (HRI), Top 4 of 206 papers	2018
[A4]	NSF Graduate Research Fellowship Program Honorable Mention	2017
[A3]	HRI Pioneer, accepted to the selective workshop held at HRI 2017	2017
[A2]	Best Paper Award Nominee, IEEE Symposium on Robot and Human Interactive Communication (RO-MAN)	2017
[A1]	ACM SIGGRAPH Student Research Competition 1st Place	2015

THESES

[T2] **Rakita, D.** 2022. On the Formulation, Characterization, and Application of Per-instant Pose Optimization as a Motion Generation Paradigm in Robotics. University of Wisconsin-Madison Department of Computer Sciences, PhD Dissertation.

[T1] **Rakita, D.**, Mutlu, B., and Gleicher, M. 2017. Relaxed-IK Solver: A Framework for Robot Arm Importance-based Inverse Kinematics. University of Wisconsin-Madison Department of Computer Sciences, Masters Tech Report.

FUNDING

Office of Naval Research: *Robot Manipulation in Densely Cluttered Environments*. Principal Investigator: Daniel Rakita. Co-PI(s): Brian Scassellati. Award Amount: $1,212,027. 2024 - 2027

Cisco Graduate Student Fellowship. Award Amount: one year PhD tuition and stipend. 2021-2022

Microsoft PhD Fellowship. Award Amount: $84,000 for tuition, stipend, and travel funds. 2019-2020

TEACHING

CPSC 487/587 3D Spatial Modeling and Computing. Yale University. (course I designed)

Several areas of computer science and related fields must model and compute how objects are situated in three-dimensional space over time, such as robotics, computer vision, computer graphics, computational physics, computational biology, aerospace engineering, and so on. This course will teach students how to computationally model the spatial configuration of and spatial relationships between objects over time. Topics covered will include various methods for representing spatial configurations and transformations (such as transformation matrices, Euler angles, unit quaternions, dual quaternions, etc.), hierarchical chaining of spatial transformations, derivatives of spatial representations with respect to time, computing intersections and penetration depths between objects in space, interpolating over spatial representations (such as using splines), signal processing over spatial transformations, optimizing over spatial representations, and more.

To develop these concepts rigorously, we will draw from Linear Algebra, Calculus, Topology, Lie Theory, and Geometric Algebra. Real-world examples from robotics, computer vision, and computer graphics will be utilized to solidify these concepts, with programming assignments, problem sets, and a final project that will allow students to apply what they have learned. Interactive visual aids created by the instructor will be an integral part of lectures to help students connect mathematical concepts with spatial phenomena.

Offerings:

- Spring 2024. Course Rating: 4.5/5.0

CPSC 485/585 Applied Planning and Optimization. Yale University. (course I designed)

This course introduces students to concepts, algorithms, and programming techniques pertaining to planning and optimization. At a high level, the course teaches students how to break down a particular problem into a state-space or a state-action space, how to select an effective planning or optimization algorithm given the problem at hand, and how to ultimately apply the selected algorithm to achieve desired outputs. Concepts are solidified through grounded, real-world examples (particularly in robotics, but also including machine learning, graphics, biology, etc.). These examples come in the form of programming assignments, problem sets, and a final project. General topics will include discrete planning, sampling-based path planning, optimization via matrix methods, linear programming, computational differentiation, non-linear optimization, and mixed integer programming. After the course, students should be able to generalize their knowledge of planning and optimization to any problem domain.

Offerings:

- Spring 2023. Course Rating: 4.5/5.0
- Fall 2023. Course Rating: 4.5/5.0

CPSC 685 Topics on Robot Motion Generation. Yale University. (course I designed)

This course focuses on concepts, approaches, and algorithms related to robot motion generation. Students will read, summarize, present on, and discuss papers and textbook chapters related to search-based path planning, sampling-based path planning, inverse kinematics, and trajectory optimization. These readings span the full range between historical context to current trends on the above topics. Further, some lecturing is interspersed throughout the course such that students can gain background on foundational topics in robotics (e.g., kinematics, dynamics, rotations, non-linear optimization, etc.) in order to more fully grasp the assigned papers and chapters. The course involves a semester-long project where students (optionally working in small groups) can choose between an implementation-based project or a writing-based project.

Offerings:

- Fall 2022. Course Rating: 4.8/5.0

GUEST LECTURES

CPSC 472 Intelligent Robotics. Yale University.	Fall 2022
CS/ Psych 770 Human-Computer Interaction. University of Wisconsin-Madison.	Spring 2020
CS 559 Introduction to Computer Graphics, University of Wisconsin-Madison.	Spring 2019

STUDENT ADVISING

Ph.D. Students

- Liam Merz Hoffmeister (2023 -)
- Xiatao Sun (2023 -)
- Chen Liang (2024 -)
- TJ Vitchutripop (2024 -)
- Peter Wang (2024 -)

Masters Students

- Alan Li (2024 -)
- Yinliang Chen (2024 -)

Undergraduate Students

- Alex Wa (2025 -)
- Andy Xu (2025 -)
- Braeden Cullen (2025 -)
- Derek Gao (2025 -)
- Felicia Zheng (2025 -)
- Jack Yin (2025 -)
- Tim Li (2025 -)
- Ian Lim (2024 -)
- Andrew Fu (2024 -)
- Ryan Jin (2024 -)
- Blaze Goldstein (2024 -)
- Anand Srinivasan (2024 -)
- Haroon Mohamedali (2024 -)
- Richard Xue (2024 -)
- Byron Li (2024 -)
- Griffin Thompson (2024 -)
- Roshan Klein-Seetharaman (2024 -)
- Francis Fan (2023 -)
- Jack Chen (2023 -)
- Ryan Tsai (2023 -)
- Sem Asmelash (2022 - 2024)
- Sophie Usherwood (2022 - 2023)

Senior Thesis Advising

From Skeletal Motion to Conformal Geometric Algebra: A Novel Approach to Human Motion Modeling — Fall 2024
Griffin Thompson, Yale University

Real-World Motion Planning and Optimization Using Markerless Localization — Fall 2024
Ryan Tsai, Yale University

3D Scene Reconstruction for IMA Division Surgery — Fall 2024
Anand Srinivasan, Yale University

Efficient Spatial Representations using Geometric Algebra for Robot Learning — Fall 2024
Roshan Klein-Seetharaman, Yale University

Revitalizing Stained Glass: Improving the Profitability of Stained Glass by Applying Modern Manufacturing Techniques — Spring 2024
Chris Ward, Yale University (co-advised with Ian Abraham)

ACADEMIC SERVICE

Associate Editor, Transactions on Human-Robot Interaction (THRI)	2025-Current
Program Committee Member, HRI	2024
Associate Editor, ICRA	2024
Session Chair, ICRA session Optimization-Based Motion Planning	2021
Review Editor, Frontiers in Robotics and AI	2021-Current
Reviewer (>200 papers), ICRA, IROS, RSS, RA-L, TRO, HRI, CHI, SIGGRAPH, Transactions on Mechatronics, Frontiers, Humanoids	2017-Current
